

103年公務人員高等考試三級考試試題

類 別：土木工程、結構工程

科 目：鋼筋混凝土學與設計

考試時間：2小時

※注意：(一)可以使用電子計算器。

(二)不必抄題，作答時請將試題題號及答案依照順序寫在試卷上，於本試題上作答者，不予計分。

歐陽老師 主解

下列試題必須依照中國土木水利學會「混凝土工程設計規範（土木401-100）」作答，否則不計分。

可能使用之公式，但不限於：

$$\phi = 0.65 + (\varepsilon_r - 0.002)(0.25 / 0.003) \quad E_s = 2.04 \times 10^6 \text{ kgf/cm}^2 \quad E_c = 15000\sqrt{f'_c} \text{ kgf/cm}^2$$

$$V_c = 0.53\sqrt{f'_c}b_wd \quad V_c = (0.50\sqrt{f'_c} + 175\rho_w)\frac{V_u d}{M_u}b_wd \leq 0.93\sqrt{f'_c}b_wd$$

$$s \leq 38\left(\frac{2,800}{f_s}\right) - 2.5c_c \leq 30\left(\frac{2,800}{f_s}\right) \quad A_{s,min} = \max\left[\frac{0.8\sqrt{f'_c}}{f_y}b_wd, \frac{14}{f_y}b_wd\right]$$

$$A_{v,min} = \max\left[\frac{0.2\sqrt{f'_c}b_w s}{f_{yt}}, 3.5b_w s / f_{yt}\right]$$

$$\beta_1 = 0.85 - 0.05\frac{f'_c - 280}{70} \text{ 且 } 0.65 \leq \beta_1 \leq 0.85$$

一、一矩形梁寬30 cm, h=70 cm, 試求在只有拉力筋時，依照規範規定，最小設計彎矩強度

$\phi M_{n,min}$ 及最大設計彎矩強度 $\phi M_{n,max}$ 為何？已知d=6.5 cm, $f' = 350 \text{ kgf/cm}^2$, $f_y = 4,200 \text{ kgf/cm}^2$ 。（25分）

解：

$$(1) 0.8\sqrt{f'_c} = 0.8\sqrt{350} = 14.967 > 14$$

$$\therefore A_{s,min} = \frac{0.8\sqrt{f'_c}}{f_y} bwd = \frac{14.967}{4200} \times 30 \times 65 = 6.95 \text{ cm}^2$$

$$A_s f_y = 0.85 f'_c ab$$

$$\Rightarrow 6.95 \times 4.2 = 0.85 \times 0.35 \times 30a$$

$$\Rightarrow a = 3.27 \text{ cm}$$

$$x = \frac{a}{\beta_1} = \frac{3.27}{0.8} = 4.09 \text{ cm} < X_{0.005} = \frac{3}{8}d = \frac{3}{8} \times 65 = 24.375 \text{ cm}$$

故 $\phi = 0.9$

$$\begin{aligned} \phi M_{n,min} &= 0.9 \times 4.2 \times 6.95 \left(65 - \frac{3.27}{2}\right) = 1664.7 \text{ tf} \cdot \text{cm} \\ &= 16.65 \text{ tf} \cdot \text{m} \end{aligned}$$

【版權所有，重製必究！】

$$M_{cr} = 2\sqrt{f'_c} \times S = 2\sqrt{350} \times \frac{30 \times 70^2}{6} = 916706 \text{ kgf} \cdot \text{cm}$$

$$= 9.167 \text{ tf} \cdot \text{m}$$

$$16.65 > \phi M_{cr} = 0.9 \times 9.167 = 8.25 \text{ tf} \cdot \text{m}$$

$$\therefore \phi M_n, \min = \underline{\underline{8.25}}$$

(2)嘗試使用 $\epsilon_t = 0.004$

$$x = \frac{3}{7}d = \frac{3}{7} \times 65 = 27.86 \text{ cm}$$

$$a = \beta_1 x = 0.8 \times 27.86 = 22.29 \text{ cm}$$

$$A_s f_y = 0.85 f'_c ab$$

$$\Rightarrow 4.2 A_s = 0.85 \times 0.35 \times 30 \times 22.29$$

$$\Rightarrow A_s = 47.36 \text{ cm}^2$$

$$\phi = 0.65 + (0.004 - 0.002) \left(\frac{0.25}{0.003} \right) = 0.8167$$

$$\phi M_n = 0.8167 \times 47.36 \times 4.2 \left(65 - \frac{22.29}{2} \right) = 8748.82 \text{ tf} \cdot \text{cm}$$

$$= 87.49 \text{ tf} \cdot \text{m}$$

嘗試使用 $\epsilon_t = 0.005$

$$x = \frac{3}{8}d = 24.375 \text{ cm}$$

$$a = \beta_1 x = 0.8 \times 24.375 = 19.5 \text{ cm}$$

$$Asfy = 0.85 f'_c ab$$

$$\Rightarrow 4.2 As = 0.85 \times 0.35 \times 30 \times 19.5$$

$$\Rightarrow As = 41.438 \text{ cm}^2$$

$$\phi M_n = 0.9 \times 41.438 \times 4.2 \left(65 - \frac{19.5}{2} \right) = 8654 \text{ tf} \cdot \text{cm}$$

$$= 86.54 \text{ tf} \cdot \text{m} < 87.49 \text{ tf} \cdot \text{m}$$

$$\therefore \phi M_{n,max} = 87.49 \text{ tf} \cdot \text{m}$$

二、同上梁，若無剪力筋時，可承受之剪力 ϕV_n 為何？配置最小剪力筋時，該斷面可承受剪力

ϕV_n 為何？該斷面可承受之最大剪力 ϕV_n 為何？在此時其剪力鋼筋之間距為何？

(剪力鋼筋為D10, $d=0.953 \text{ cm}$, $A_b=0.71 \text{ cm}^2$) (25 分)

解：

(1)無剪力筋時， $V_s = 0 \text{ kgf}$

$$\phi V_n = \phi V_c = 0.75 \times 0.53 \sqrt{f'_c b w d} = 0.53 \sqrt{350} \times 30 \times 65 \times 0.75$$

$$(2) S_{\max} = \min \left[\frac{A_v f_y}{3.5 b w}, \frac{A_v f_y}{0.2 \sqrt{f'_c} b w} \right]$$

$$0.2 \sqrt{f'_c} = 0.2 \sqrt{350} = 3.74 > 3.5$$

$$\therefore S_{\max} = \frac{2 \times 0.71 \times 4200}{0.2 \sqrt{350} \times 30} = 53.13 \text{ cm}$$

但 S 不應超過 $\frac{d}{2}$

$$\frac{d}{2} = \frac{65}{2} = 32.5 \text{ cm}$$

$$\therefore \text{取 } S_{\max} = 32.5 \text{ cm}$$

$$V_s = \frac{A_v F_y d}{S} = \frac{2 \times 0.71 \times 4200 \times 65}{32.5} = 11928 \text{ kgf} = 11.928 \text{ tf}$$

$$\phi V_n = 0.75(V_c + V_s)$$

$$= 14.5 + 0.75 \times 11.928 = 23.447 \text{ tf}$$

(3) 取 $V_s = 4V_c$

$$\phi V_n = \phi(V_s + V_c) = 5\phi V_c = 5 \times 14.5 = 72.5 \text{ tf}$$

$$S = \frac{A_v f_y d}{V_s} = \frac{A_v f_y d}{4V_c} = \frac{0.71 \times 2 \times 4200 \times 65}{4 \times 19335} = 5 \text{ cm}$$

$$S_{\max} = \min \left[\frac{d}{4}, 30 \text{ cm}, \frac{a_v f_y}{3.5 b w}, \frac{a_v f_y}{0.2 \sqrt{f'_c} b w} \right]$$

$$= \min [16.25, 30, 56.8, 53.13] = 16.25 \text{ cm}$$

三、同上梁，在考慮開裂及施工性時，若主筋為D32 ($d=3.22 \text{ cm}$, $A_b=8.143 \text{ cm}^2$)，剪力筋為D10，在單層鋼筋時，可求得最大鋼筋數目及最小鋼筋數目，求對應之 ϕM_n 。（假設最大粗粒料粒徑為2.5cm）（25分）

解：

(1) 考慮施工性

$$\begin{aligned} \text{主筋左右最小淨間距 } S_{\min} &= \max[1.33d_{\text{骨材}}, 2.5, d_b] \\ &= [1.33 \times 2.5, 2.5, 3.22] = 3.325 \text{ cm} \end{aligned}$$

設主筋單層排n支

$$4 \times 2 + 0.953 \times 2 + 3.22n + 3.325(n - 1) = 30 \text{ cm}$$

$$6.545n = 23.419 \Rightarrow n = 3.58$$

只能排3支………單層最大鋼筋數目

$$A_{s,\max} = 3 \times 8.143 \times = 24.429 \text{cm}^2 < 41.438 \text{cm}^2 \text{ (見第一題)}$$

故 $\phi = 0.9$

$$A_s f_y = 0.85 f'_c ab$$

$$\Rightarrow 4.2 \times 24.429 = 0.85 \times 0.35 \times 30a$$

$$\Rightarrow a = 11.496 \text{cm}$$

$$\begin{aligned}\phi M_n &= 0.9 \times 4.2 \times 24.429 \left(65 - \frac{11.496}{2}\right) = 5471.4 \text{ tf} \cdot \text{cm} \\ &= 54.714 \text{ tf} \cdot \text{m}\end{aligned}$$

(2) 考慮裂紋控制

$$c_c = 4 + 0.953 = 4.953$$

$$f_s = \frac{2}{3} f_y = \frac{2}{3} \times 4200 = 2800 \text{ kgf/cm}^2$$

$$\frac{38 \times 2800}{f_s} - 2.5 C_c = 38 - 2.5 \times 4.953 = 25.6175 \text{cm}$$

$$\frac{30 \times 2800}{f_s} = \frac{30 \times 2800}{2800} = 30 \text{cm}$$

$$S_{\max} = \min[25.6175 \text{cm}, 30 \text{cm}] = 25.6175 \text{cm}$$

$$\text{配2支主筋, } S_{\text{actual}} = 30 - 4 - 4 - 0.953 \times 2 - 3.22$$

$$= 16.874 \text{cm} < 25.6175 \text{cm} \quad \underline{\text{主筋至少2支}}$$

$$A_s = 2 \times 8.143 = 16.286 \text{cm}^2 < 41.438 \text{cm}^2$$

$\therefore \phi = 0.9$

$$A_s f_y = 0.85 f'_c ab$$

$$\Rightarrow 16.286 \times 4.2 = 0.85 \times 0.35 \times 30a$$

$$\Rightarrow a = 7.664 \text{cm}$$

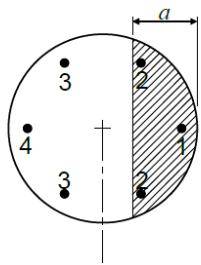

$$\begin{aligned}\phi M_n &= 0.9 \times 16.286 \times 4.2 \left(65 - \frac{7.664}{2}\right) = 3765.57 \text{tf} \cdot \text{cm} \\ &= 37.66 \text{tf} \cdot \text{m}\end{aligned}$$

四、一圓形柱見圖一，直徑40cm，使用6根D25 ($d=2.54 \text{cm}$, $A_s=5.067 \text{cm}^2$) 鋼筋沿圓周均勻排列，鋼筋中心至最近之混凝土表面為6.5cm，混凝土強度為350 kgf/cm^2 ，鋼筋強度為4200 kgf/cm^2 ，試求：

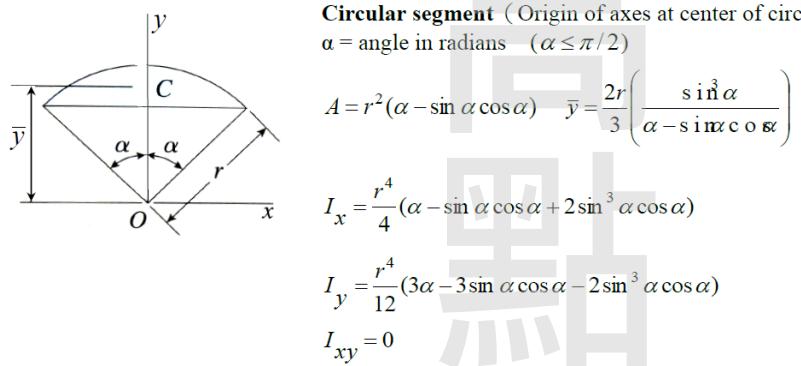

(一) 偏心=0 時之 P_n 。(5分)

(二) 中性軸位於圓心左側10cm 時之 P_n 與 M_n ，中性軸平行於鋼筋2-2 之連線（可忽略鋼筋2及鋼筋3之效應）。(10分)

(三) 中性軸位於圓心右側10cm 時之 P_n 與 M_n ，中性軸平行於鋼筋2-2 之連線（可忽略鋼筋2及鋼筋3之效應）。(10分)

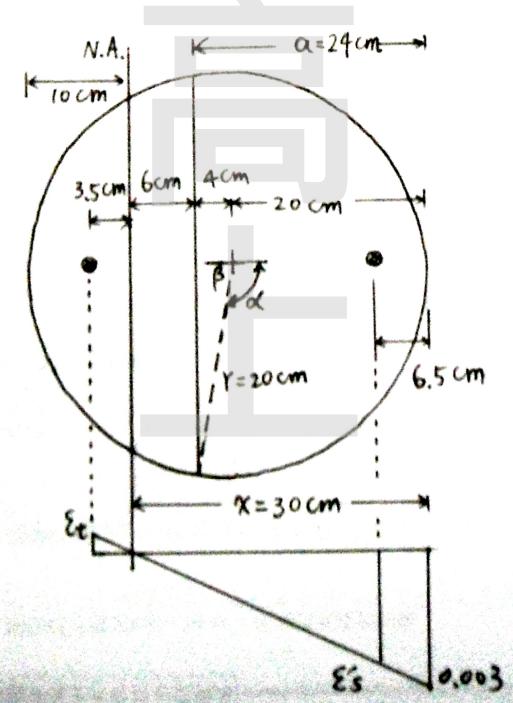

圖一

解：

$$\begin{aligned}
 (一) P_0 &= 0.85f'_c A_c + A_{st}(f_y - 0.85f'_c) \\
 &= 0.85 \times 0.35 \times \frac{\pi}{4} \times 40^2 + 6 \times 5.067(4.2 - 0.85 \times 0.35) \\
 &= 373.85 + 118.644 = \underline{\underline{492.49 \text{tf}}}
 \end{aligned}$$

(二)

【版權所有，重製必究！】

$$x = 30\text{cm}$$

$$a = \beta \cdot x = 0.8 \times 30 = 24\text{cm}$$

$$\varepsilon'_s = \frac{0.003}{30} (30 - 6.5) = 2.35 \times 10^{-3} > \varepsilon_y \quad \text{壓筋降伏}$$

$$\varepsilon_t = \frac{0.003}{30} (10 - 6.5) = 3.5 \times 10^{-4} > \varepsilon_y \quad \text{拉筋未降}$$

$$T = A_s f_s = 5.067 \times 2.04 \times 10^6 \times \varepsilon_t / 1000 \\ = 3.618 \text{ tf}$$

$$C_s = A'_s (f_y - 0.85 f'_c) = 5.067 (4.2 - 0.85 \times 0.35) = 19.774 \text{ tf}$$

$$\beta = \cos^{-1} \frac{4}{20} = 78.463^\circ = 1.3694 \text{ rad.}$$

$$A_1 = r^2 (\beta - \sin \beta \cos \beta) = 20^2 (1.3694 - \sin 1.3694 \cos 1.3694) \\ = 469.35 \text{ cm}^2$$

$$Ac = \pi r^2 - A_1 = \pi \times 20^2 - 469.35 = 787.2 \text{ cm}^2$$

$$Cc = 0.85 f_c A_c = 0.85 \times 0.35 \times 787.2 = 234.2 \text{ tf}$$

$$P_n = C_c + C_s - T = 234.2 + 19.774 - 3.618 = 250.36 \text{ tf}$$

$$y_1 = \frac{2r}{3} \left[\frac{\sin^3 \beta}{\beta - \sin \beta \cos \beta} \right] = \frac{40}{3} \left[\frac{(\sin 1.3694)^3}{1.3694 - \sin 1.3694 \cos 1.3694} \right] = 10.688 \text{ cm}$$

$$A_1 y_1 + A_c \bar{y} = 0 \Rightarrow 469.35 \times 10.688 + 787.2 \times \bar{y} = 0$$

$$\Rightarrow \bar{y} = -6.37 \text{ cm}$$

$$M_n = C_c \bar{y} + C_s (20 - 6.5) + T (20 - 6.5) \\ = 234.2 \times 6.37 + 13.5 (19.774 + 3.618) = 1808.2 \text{ tf} \cdot \text{cm} \\ = 18.08 \text{ tf} \cdot \text{m}$$

(三)

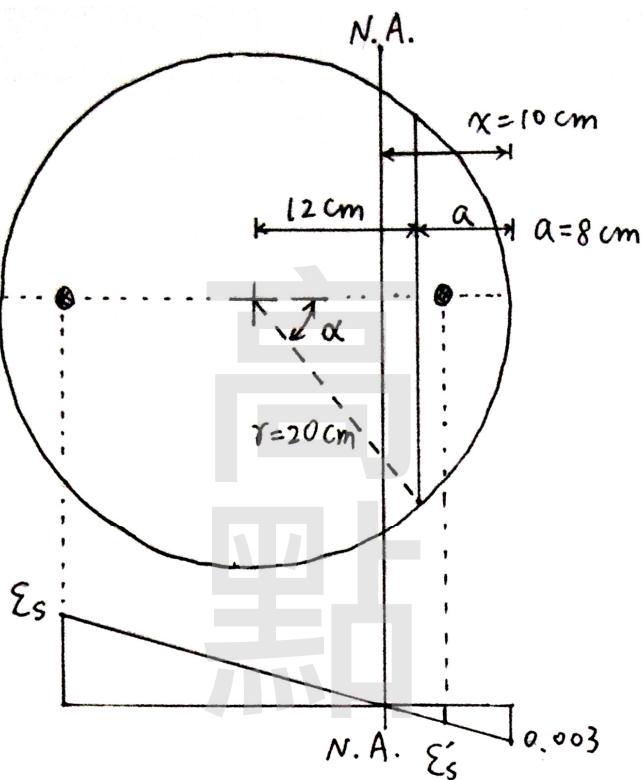

$$x = 10\text{cm}$$

$$a = \beta_1 x = 0.8 \times 10 = 8\text{cm}$$

$$\varepsilon'_s = \frac{0.003}{10} (10 - 6.5) = 1.05 \times 10^{-3} < \varepsilon_y \quad \text{壓筋未降伏}$$

$$f'_s = E_s \varepsilon'_s = 2.04 \times 10^6 \times 1.05 \times 10^{-3} = 2142 \text{ kgf/cm}^2$$

$$C_s = A_s (f'_s - 0.85 f'_c) = 5.067 (2.142 - 0.85 \times 0.35) = 9.346 \text{ tf}$$

$$\varepsilon_t = \frac{0.003}{10} \times (40 - 10 - 6.5) = 7.05 \times 10^{-3} > \varepsilon_y \quad \text{拉筋降伏}$$

$$T = A_s f_y = 5.067 \times 4.2 \times = 21.2814 \text{ tf}$$

$$\alpha = \cos^{-1} \frac{12}{20} = 0.9273 \text{ rad.}$$

$$A_c = r^2 (\alpha - \sin \alpha \cos \alpha) = 178.918 \text{ cm}^2$$

$$C_s = 0.85 f'_c A_c = 0.85 \times 0.35 \times 178.918 = 53.228 \text{ tf}$$

$$P_n = C_c + C_s - T = 53.228 + 9.346 - 21.2814 = 41.293 \text{ tf}$$

$$\bar{y} = \frac{2r}{3} \left[\frac{\sin^3 \alpha}{\alpha - \cos \alpha \sin \alpha} \right] = \frac{40}{3} \left[\frac{(\sin 0.9273)^3}{0.9273 \sin 0.9273 \cos 0.9273} \right] = 15.262 \text{ cm}$$

$$\begin{aligned} M_n &= C_c \bar{y} + 13.5(C_s + T) \\ &= 53.228 \times 15.262 + 13.5(9.346 + 21.2814) \\ &= 1225.8 \text{ tf} \cdot \text{cm} = 12.258 \text{ tf} \cdot \text{m} \end{aligned}$$
